

Electronics City Profile

Electronics City is one of the largest electronic industrial parks in India, covering an area of more than 332 acres. A formidable collection of building and interconnecting roads, Electronics City straddles the neighboring villages of Konappana Agrahara and Doddathogur, and is located just outside Bangalore proper. The complex is comprised of more than one hundred different companies, many of which are undisputed giants in the IT industry. Among the companies that have offices in the Electronics City are Wipro, Hewlett Packard, Patni Computer Systems, CGI, and Yokogawa Electric. Electronics City started out as a vision for the future by R.K. Baliga, who was instrumental in the success of the noted electronics giant, Karnataka Electronics. Baliga planned Electronics City with the idea of making Bangalore India's own Silicon Valley after the famous industrial area in the United States. Unfortunately, Baliga would not live to see his dream come to fruition, since he died in 1988.

With the death of Baliga, it was the liberalization of India's economy as championed by the likes of P.V. Narasimha Rao and Manmohan Singh that would give Electronics City the push that it needed to develop into a viable industrial park. It was then that Electronics City grew to the industrial giant that it is today.

The late 1990s brought about the passing over of Electronics City to ELCIA or the Electronics City Industries Association by the Keonics group. It was during this time that representatives from the different departments were fielded in order to address various governance and management concerns. There are currently three phases to Electronics City, namely, Phase I, Phase II and Phase III. Phase I and Phase II lie on opposite sides of Hosur Road. It was the development of Phase 2 that opened the door to more and more companies setting up shop in Electronics City. Unfortunately, this development has also caused traffic to and from Bangalore to increase considerably. In order to ease the traffic, construction work on an elevated road was started in late 2004. The project of the Indian government, the road was an indication that big plans were still in the making for Electronics City. Many people feel that the construction of this road can only result in good things, especially since more and more companies have expressed interest in opening up offices in the complex. Companies such as BOSCH, Convergy's, Volvo, Audi, Toyota, Volkswagen, General Motors, and many others stand to greatly benefit from many other projects in Electronics City that are to be implemented in the near future.
